Announcing the world's first complete, up-to-date encyclopedia of missiles and spacecraft

Here is a master sourcebook that is destined to become one of the classic references of the Space Age. It assembles key facts, specifications, and background on the important missiles, spacecraft, and rockets of the world, including the United States, Russia, France and Great Britain. More than 850 photographs and drawings, many of them declassified expressly for this volume.

Thermodynamic Properties of Air in the Temperature Interval From 1000 to 12,000 K and the Pressure Intervals from 0.001 to 1000 atm, E. V. Stupochenko, I. P. Stakhanov, E. V. Samuilov, A. S. Pleshanov and I. B. Rozhdestvenskii (RS)..... 98
Calculations of the Heating of Shells at High Speeds, I. N. Sokolova (RS)..... 375
Concerning the Problem of the Influence of Internal Degrees of Freedom of Particles on the Transport Coefficients of a Multicomponent Mixture of Gases, E. V. Samuilov (RS)..... 388
Method of Calculation of the Transport Coefficients of Air at High Temperatures, E. V. Stupochenko, B. V. Dotsenko, I. P. Stakhanov and E. V. Samuilov (RS)..... 394
Investigation of a Stationary Discontinuity Surface in an Electromagnetic Field With a Gas Conductivity Jump, G. A. Lyubimov (RS) 416
Condensation Shocks in Supersonic Nozzles, A. A. Stepchkov (RS)..... 695
Comments by R. M. Head..... 876
Location of Frontal Wave in Asymmerical Flow of Gas at High Supersonic Speed Over a Pointed Body, A. L. Gonor (RS)..... 841
Reviewer's comment, H. P. Liepman.. 842
Problem of Nearly Self-Similar Unsteady Motion, T. G. Kolebskaya (RS) 853
Reviewer's comment, Myron S. Wecker 859
Dependence of the Internal Energy of Air on the Pressure and Density at High Temperatures, S. S. Kvashnina (RS)..... 875
Reviewer's comment, Stuart R. Brinkley Jr..... 876
Ablation With Ice Model at M=5.8, Toshi Kubota..... 1164
Small Parameter Method for Second-Order Differential Equations With Discontinuous Terms, T. S. Shteinberg (RS)..... 1047
Investigation of Heat Exchange in Supersonic Flow of Air in Tubes, A. E. Marenov (RS)..... 1055
Effects of Diffusion and Chemical Reaction on Convective Heat Transfer, Daniel E. Rosner (TN)... 114

LABORATORY DIRECTOR

Hyperthermal Gasdynamics Laboratory

DESCRIPTION OF POSITION RESPONSIBILITIES

Initiate, plan, solicit, conduct and supervise advanced research activities, both theoretical and experimental. These activities conducted for government agencies and private corporations include:

- **Simulation of space vehicle re-entry phenomena in hyperthermal, hypervelocity plasma tunnels**
- **Investigation of the state of high temperature plasma in arc chambers, mixing chambers, and nozzles**
- **Design and development of instrumentation techniques and systems applicable to the improvement of such devices as pitot probes, calorimeters, total enthalpy and mass flow probes**
- **Study of arc generator characteristics**

Communicate with customers, management and the scientific community. Assume responsibility for conduct of the Hyperthermal Gasdynamics Laboratory with specific regard for timely and satisfactory contract execution, personnel staffing, facilities' modernization, expansion, financing, and business administration.

BACKGROUND EXPERIENCE REQUIRED

Ph. D. in Aeronautical Engineering, Engineering Sciences, or equivalent with minor emphasis in Physical Chemistry, Physics and Mathematics.

Minimum of five to ten years of theoretical and experimental research related to such phenomenological processes as abalation, gas dissociation and recombination, gas flow interaction with electric arc discharges, aerodynamic heating.

Specific background with reference to aerodynamic simulation concepts, similarity laws, basic physics related to plasma technology, orbital mechanics, basic gasdynamic principles, shock tube and hypersonic flow research.

Please send resume to Pete De Paolo, *Personnel Manager.*

PLASMADYNE CORPORATION

A Subsidiary of Giannini Scientific Corporation

3839 S. Main Santa Ana, California

ATLANTIC RESEARCH CORPORATION

NEEDS

Rocket Test Supervisor

To supervise assembly and loading of test rockets and customer units. Manage static firing facility, including scrutiny of static test setups to insure proper alignment and support, of instrumentation and calibration systems to insure data accuracy, and regular equipment checkouts. Cooperate with development project engineers in test scheduling, review test results from computation group, and contribute to new equipment design. B.S. or M.S. in M.E., E.E., or Ch.E., aptitude in mechanics and electronics, and considerable experience in production and electronic measuring instrumentation.

Research Aerodynamicist

To work in Aerothermodynemics Group on aerodynamic heating problems, gaseous combustion of turbulent flames, and scientific interpretation of results, mathematical analysis of rocket exterior ballistic problems, such as performance stability, etc. Good theoretical background in fluid dynamics and thermodynamics. M.S. in mechanical, chemical or aeronautical engineering with a thorough knowledge of all phases of heat transmission.

Rocket Project Engineer

To work on prototype development of solid propellant rocket propulsion systems. Involves coordination of programs with mechanical design, ballistic, instrumentation and test engineers. Requires personeble men with interests and demonstrated abilities to carry systems from inception through test and qualification.

B.S. or M.S. in mechanical or chemical engineering with the ability to work effectively with others.

Atlantic Research, the largest independent R&D organization in the Washington, D.C. area, is active in all phases of solid propellant rocketry and propulsion systems, from basic research on combustion to the manufacture of shelf items. All our staff requirements are for permanent positions offering the opportunity to contribute to our expansion and your future.

U. S. citizenship is required for all positions.

Clarence H. Weissenstein, Director,
Technical Personnel Recruitment

Fifth Harmonic of Earth's Gravitational Field, Herman F. Michielsen (TN)... 976
Some Possible Operations on the Moon, F. Zwicky (TN)... 1177

HUMAN FACTORS AND BIOASTRONAUTICS

Visual Sensitivity of Residents of Other Planets, Allen E. Fuhs (TC) 577

A top expert on Russia tells why the Soviets lead in rocketry — and how we can close the gap now —

RUSSIA'S ROCKETS AND MISSILES

by Albert Parry

Contributing Editor, *Missiles and Rockets*

One of the first experts to predict Sputnik I describes Soviet progress and potential — how Sputniks and Luniks were developed; latest status of East-West rivalry; contributions of German scientists to Soviet success; details about the Russian IRBM now being installed on Red submarines. *"Brings information that has not been available before."*—from the introduction by WILLY LEY
